

THE OPERATING SYSTEM FOR CAR RENTAL

Run your entire rental agency from one desk.

Fleet, bookings, contracts, e-signature, invoicing and VAT — in one fast, multilingual platform built for rental agencies.

THE PROBLEM

Most rental agencies run on a whiteboard, an Excel file, a WhatsApp group and a Word contract.

It works — until a car is promised twice, an insurance renewal is missed, or a traffic fine arrives four months later and nobody can prove who was driving.

WHAT DRIVEDESK IS

One system for everything an agency does every day.

Your cars, your customers, your rentals, your contracts and your VAT — connected, so nothing is retyped and nothing is lost.

29

business modules,
from fleet to VAT

3

languages live,
including full Arabic

100

permissions —
you decide who sees what

1

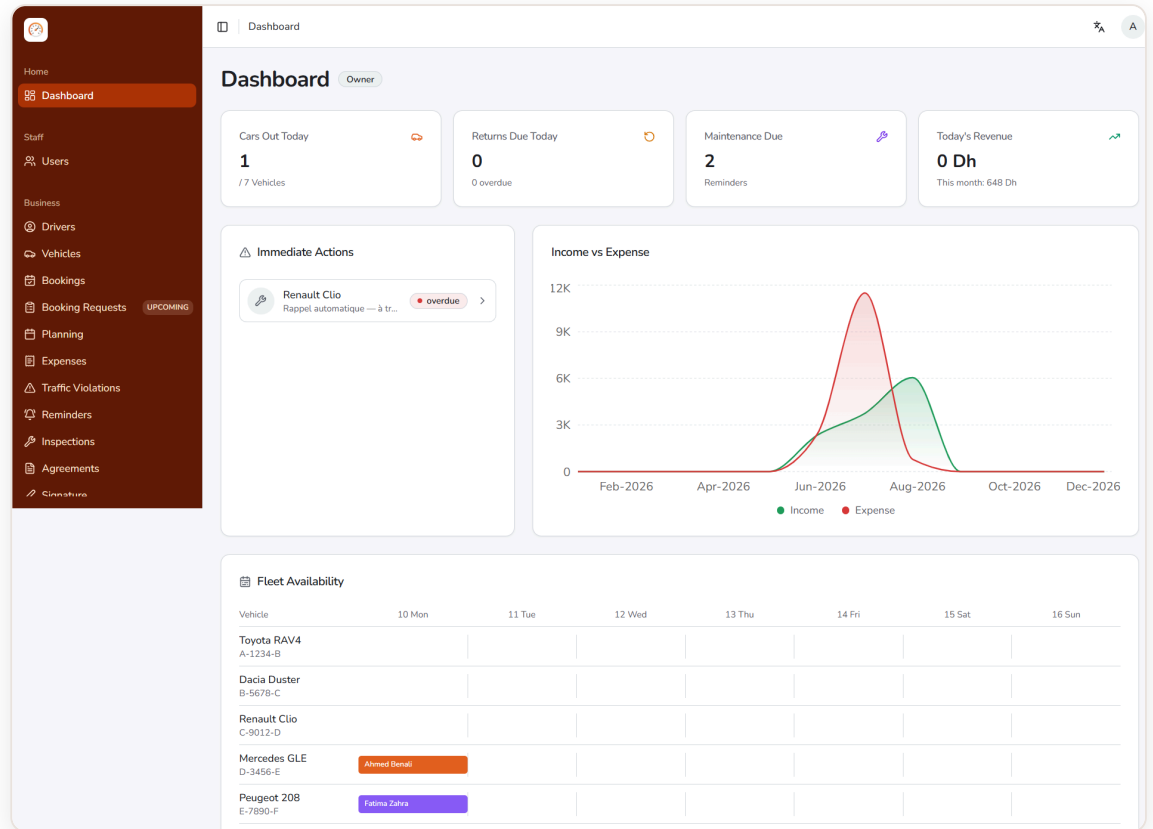

domain, one database,
entirely yours

EVERY MORNING

The whole business, in five seconds.

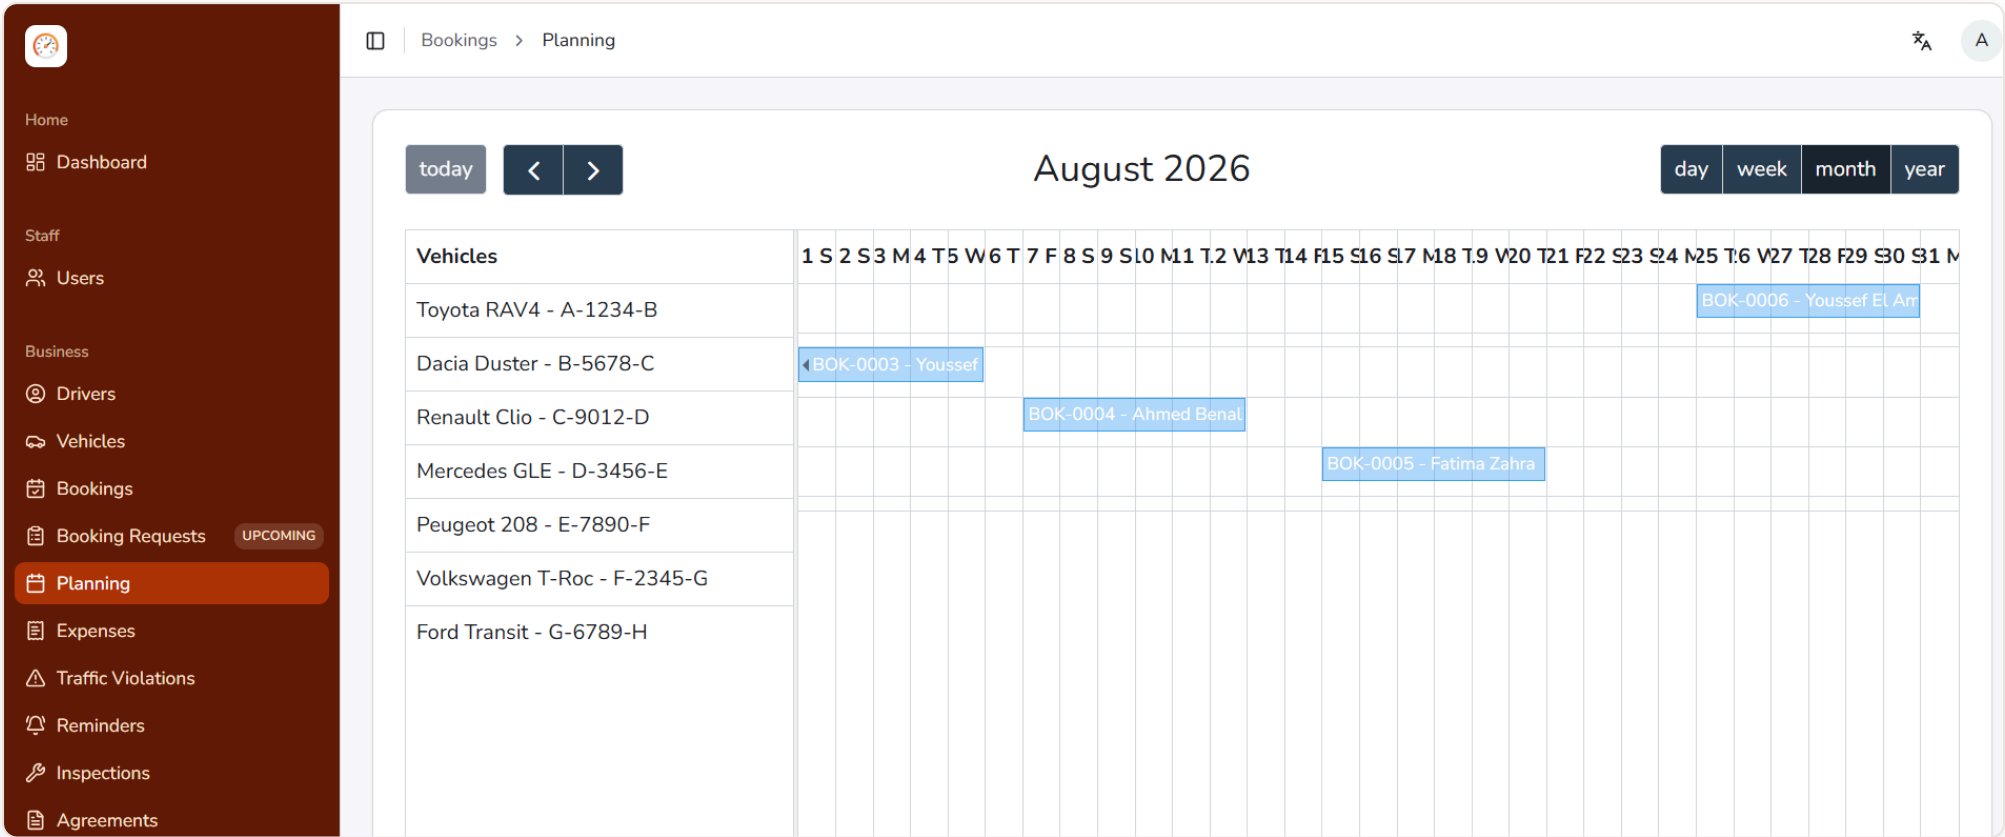

- **Cars out today** — and how many you own
- **Returns due today** — and how many are late
- **Maintenance due** — before it becomes a breakdown
- **Revenue today** — and month to date
- **Immediate actions** — what is late, clickable

Operational numbers, not vanity metrics. Nobody has to be phoned.

The dashboard — plus a twelve-month income-versus-expense chart and a seven-day fleet timeline.

Replace the whiteboard.

One row per vehicle, one bar per rental. Switch between day, week, month and year. Every gap is a car you could be renting.

FLEET & CUSTOMERS

Every car has a file.
So does every customer.

Vehicles

Developed by Bangicode

Customers — licence number with issue and expiry, national ID, company ICE, and scans of their papers on the file. Plus a **blacklist** that warns your staff before keys are handed over.

CONTRACTS

Generated, branded, **signed on screen.**

The screenshot shows a digital contract interface for a rental agreement. At the top, there's a breadcrumb trail 'Rental Agreements > Details' and a 'Print' button. The contract is divided into several sections: 'Agreement' with fields for ID, dates, duration, and status; 'Driver' with fields for name, address, license, and phone; 'Vehicle' with fields for model and license plate; and 'Signatures' with lines for two clients. A clock icon is in the top left, and a list of identifiers (IF, RC, Patente, ICE) is in the top right. A handwritten signature is visible under 'Signature Client 1'.

- Built from the booking — **nothing retyped**
- Your **IF, RC, Patente and ICE** on every page
- **Two drivers** supported, with full details
- Your own **terms and conditions**
- Signed with a **finger on a tablet**, stored on the customer's file

No Word template. No missed field. No contract lost in a drawer.

The contract as it prints — your identifiers, both drivers, the vehicle, the signatures and your full terms.

Priced, taxed and invoiced **automatically.**

- Days, add-ons and location surcharges **priced automatically**
- **HT · TVA 20% · TTC** on every booking and invoice
- Cash, bank transfer, card and cheque — **partial payments supported**
- Payment status **updates itself**: unpaid → partly paid → paid
- The **5 000 MAD cash ceiling** handled for you, with compliant receipts

Total Amount (HT)	2,800.00 Dh
TVA (20%)	700.00 Dh
Rest:	-4,540.00 Dh
Due Amount (TTC)	3,500.00 Dh

Payment History

A booking priced end to end, with its full payment history.

Your whole year, **already totalled.**

- **VAT month by month** — HT, TVA and TTC, totalled
- **Top clients** by VAT and by revenue
- **Most rented** and **most profitable** vehicles
- Sequentially numbered **factures** with your ICE, RC and IF
- Download one as PDF — or **fifty as a single ZIP**

The page you send your accountant. Two days a month, gone.

A fine arrives in November for something that happened in July.

Type the plate and the exact time.
DriveDesk tells you who was driving.

- Finds the rental running at **that exact minute**
- Grades the match **exact · probable · none**
- Your staff **confirm** — the system never decides alone
- Recovery tracked to closure, with the amount recovered
- A batch of fines **imported from Excel**

The screenshot shows a web application interface for creating a traffic violation. On the left is a dark red sidebar with a menu containing: Dashboard, Users, Drivers, Vehicles, Bookings, Booking Requests (with an 'UPCOMING' badge), Planning, Expenses, Traffic Violations (highlighted in orange), Reminders, Inspections, Agreements, and Clusters. The main content area has a header 'Traffic Violations > Create'. Below this is a form titled 'Create Traffic Violation' with a subtitle: 'The plate and the exact time are what identify the renter — enter them as printed on the notice.' The form fields are arranged in two columns: License Plate (text input), ID National (text input), Violation Date (date picker), Violation Time (time picker), Authority (text input), Notice Date (date picker), Location (text input), Amount (text input), Document (file upload button), Description (text area), and Notes (text area). At the bottom right of the form are 'Close' and 'Create' buttons. The footer of the page says 'Developed by Bangicode'.

Money most agencies currently write off.

BEFORE IT COSTS YOU

Nothing expires without warning.

Reminders — insurance renewal, vidange, contrôle technique, service. Graded automatically as overdue, urgent, upcoming or pending, and surfaced on the dashboard.

Inspection

Search inspections...

VEHICLE	INSPECTION DATE	INSPECTION BY	INSPECTION STATUS	REPAIR STATUS
RAV4	2026-06-11	Équipe technique	Completed	Completed
Duster	2026-07-11	Équipe technique	Completed	Completed
Renault Clio	2026-07-26	Équipe technique	Reject	In Progress
Mercedes GLE	2026-08-03	Équipe technique	Completed	Completed
Peugeot 208	2026-06-26	Équipe technique	Completed	Completed

Developed by Bangicode

Inspections — your own checklist with a note per line, the odometer, the result, the repair status and the repair cost, logged against the vehicle.

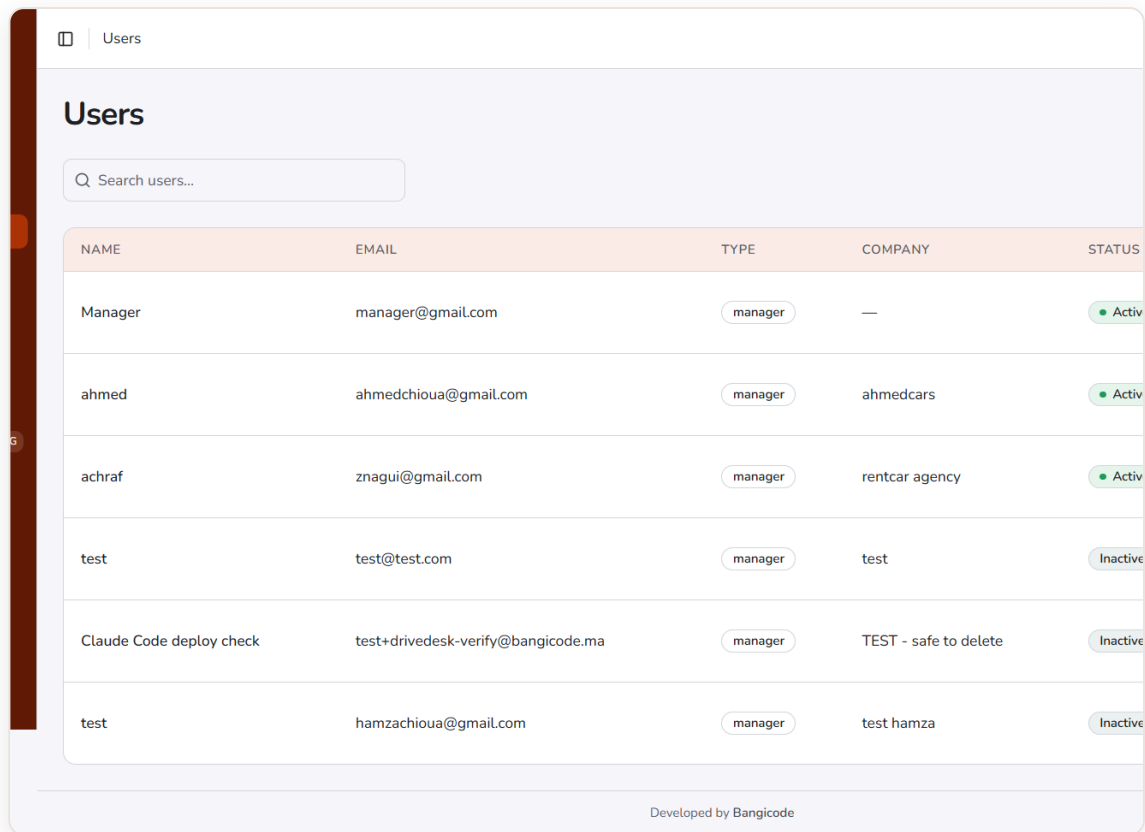

CONTROL

You decide who sees what.

- **Owner** — everything
- **Manager** — runs operations, but not your settings
- **Custom roles** — built from **100 individual permissions**

A counter agent can create bookings and print contracts and never see a single revenue figure. Menus they have no right to simply don't appear — and the server refuses the action independently.

Every login is recorded — who connected, when, and from what device.

NAME	EMAIL	TYPE	COMPANY	STATUS

Staff logins, roles and access — managed by you.

WHITE-LABEL

Your name. Your domain. Your database.

- ✓ Your own **web address** and SSL certificate
- ✓ Your **logo, name and colours** throughout
- ✓ Your **ICE, RC, IF and Patente** on every invoice and contract
- ✓ Your own **installation and database** — never shared
- ✓ Runs on **ordinary cPanel hosting**, no special server
- ✓ You stay on the **version you trust**, for as long as you want

Nothing your customer sees says DriveDesk.

Your legal identifiers on every document, your currency, your numbering.

**English, French and Arabic —
with true right-to-left.**

14

GETTING STARTED

What it takes to go live.

You provide

Your logo and brand colour. Your legal identifiers — ICE, RC, IF, Patente. Your current rental contract terms. Your fleet list. Your staff and their roles.

We set up

Your own installation, your own database, your domain and SSL certificate, your branding, your contract terms, your fleet loaded — history bulk-imported from Excel if you have it.

You get

A live system on your own web address, your staff trained, and your VAT working from the first invoice. No special server. No software to install.

Timeline depends on your domain and how quickly we receive your branding and terms — we'll confirm a firm date once we have them.

NEXT STEP

See it with **your own cars in it.**

We'll set up a test account with your fleet, your logo and your legal identifiers — so you can show it to your manager this week.
