

INTERNAL · SALES ENABLEMENT

The DriveDesk Salesperson's Handbook

Everything you need to understand the product, run a confident demo, answer the hard questions — and know exactly where the line is between what we *have* and what we *don't*.

Written for: a salesperson with no technical background

Product: DriveDesk — car rental agency management software · **Demo:** [drivedesk.ma](#)

Version: 1.0 · **Date:** 10 August 2026 · **Built by:** Bangicode

00 Start here

Ten minutes now saves you a lost deal later.

You do not need to understand how DriveDesk is built. You need to understand what an agency owner's day looks like, which of their problems this software removes, and which ones it doesn't. That's what this handbook is for.

Read in this order

1. **§1 What DriveDesk is** — three versions of the pitch: 10 seconds, 60 seconds, 3 minutes.
2. **§2 Who to sell to** — the right prospect, the qualifying questions, and who to walk away from.
3. **§3 The vocabulary** — the fifteen words you must be able to use naturally. Learn these **before** your first call.
4. **§4 The product, screen by screen** — what each screen does, and the sentence to say when you show it.
5. **§5 One rental, end to end** — the story that makes the whole thing click.
6. **§6 The six things nobody else has** — your real differentiators.
7. **§7 The demo script** — a tested 25-minute run.
8. **§8 Objection handling** — the twelve you will actually hear.
9. **§9 What you must NOT promise** — the most important section in this document.
10. **§10 After they say yes** — what onboarding actually involves.
11. **§11 Cheat sheet** — one page, print it, keep it in your bag.

How to read the coloured boxes

SAY THIS

"A line you can use almost word for word in front of a prospect."

CAREFUL

True, but easy to overstate. Phrase it the way this box phrases it.

DO NOT PROMISE

Not built. Saying it exists will cost us the client at implementation. There is no version of this that ends well.

THE ONE RULE

If you are not sure whether DriveDesk does something, say "Good question — let me confirm that and come back to you today." A one-day delay costs nothing. A wrong yes costs the account, and it costs it late, after the client has already paid and moved their data in.

01 What DriveDesk is

Three versions. Learn all three.

The 10-second version

"DriveDesk is the software a car rental agency uses to run everything — the cars, the bookings, the contracts, the invoices — from one screen instead of five notebooks and a WhatsApp group."

The 60-second version

"Most rental agencies here run on paper contracts, an Excel file for the planning, a WhatsApp group for who has which car, and an accountant who rebuilds the VAT from a shoebox of receipts every month. It works until it doesn't — a car gets double-booked, an insurance renewal is missed, a traffic fine arrives four months later and nobody can prove who was driving. DriveDesk replaces all of that with one system: your fleet, your customers, your bookings on a visual planning board, your rental contracts signed on screen, and your VAT invoices generated automatically and numbered in sequence. It's in the browser, so it works on the office computer and on the phone at the counter. It runs on your own web address with your own logo, and it speaks French, Arabic and English."

The 3-minute version — the four problems it solves

THE DAILY PAIN	WHAT DRIVEDESK DOES ABOUT IT
"Where is that car and when is it back?" Answered today by calling someone.	A planning board with one row per vehicle and one bar per rental. One glance answers it. The dashboard also shows cars out today, returns due today, and how many are overdue.
"The contract is a Word file we edit every time." Fields get missed, terms drift, signatures are on paper.	A branded contract generated from the booking, with the agency's legal identifiers, both drivers' details, the vehicle, the full terms — and the customer's signature captured on screen with a finger.
"The VAT takes three days a month." Invoices are numbered by hand; gaps and duplicates happen.	Every payment produces a properly numbered VAT invoice with the ICE, RC and IF on it. Download one as PDF, or select fifty and download them as a ZIP. A yearly report shows VAT by month, by client and by vehicle.
"A fine arrived. Whose was it?" Four months later, with nothing to go on but a plate and a timestamp.	Enter the plate and the exact time from the notice. DriveDesk finds the rental that was running at that minute and names the renter — then lets your staff confirm it before anything is charged.

What it is not

- It is **not** accounting software. It produces the VAT invoices and the report; it does not replace the accountant or file the return.
- It is **not** a GPS tracking system. It knows where a car is *booked*, not where it physically is.
- It is **not** a mobile app you download from the App Store. It's a website that works properly on a phone.
- It is **not** a marketplace. It doesn't bring the agency customers; it manages the customers they already have.

02 Who to sell to

The right prospect closes in two meetings. The wrong one closes never.

The ideal prospect

SIGNAL	WHY IT MATTERS
5 to 60 vehicles	Below 5, a notebook genuinely still works and they won't pay. Above 60, they may already have something, and our planning screens are not yet tuned for very large fleets.
Issues VAT invoices	They have an ICE, they invoice companies, the accountant chases them every month. This is our strongest single hook.
Rents to businesses, not just tourists	B2B rentals mean contracts, invoices, longer durations, and fines that arrive months later — everything we're good at.
More than one person touches the bookings	An owner plus two counter staff. That's where paper breaks and where our roles and permissions earn their keep.
Has been burnt	A double-booking, an unrecovered fine, an expired insurance, a missed <i>contrôle technique</i> . Ask about it early — it becomes the whole pitch.

Six questions that qualify in one phone call

1. "How many cars do you have out right now?" — if they have to check, that's the pitch.
2. "How do you know which car is free next Tuesday?" — listen for Excel, a whiteboard, or "I know it in my head".
3. "Who writes the contract when a customer walks in?" — listen for Word, a printed pad, or "we fill it by hand".
4. "How long does the monthly VAT take you?" — anything over half a day is a number you can quote back at them all the way to signature.
5. "What happens when a fine arrives three months later?" — most will laugh. That laugh is the sale.
6. "Who else besides you needs to log in?" — tells you the size of the deal and whether roles matter.

Walk away — or set expectations very carefully — if...

- **They want customers to pay online by card on the website.** We do not have that. See §9. This is the number one reason a deal dies late.
- **They want GPS tracking or telematics.** Not our product.
- **They want a branded iPhone/Android app.** We have a responsive website, not a store app.
- **They run several separate branches and want each branch's fleet and staff separated inside one account.** Not built. See §9.
- **They want to connect it to their existing accounting package automatically.** There is no integration API.

CAREFUL

"No online payments" is not automatically a dead deal. Most small Moroccan agencies take cash and bank transfer at the counter and have never taken a card online. Ask: "Today, how do your customers actually pay you?" If the honest answer is cash and virement, this is a non-issue — and DriveDesk records both, with the legal cash ceiling handled for them.

03 The vocabulary

If you fumble these words, the owner stops believing you understand their business.

Moroccan business & tax terms

TERM	WHAT IT MEANS	WHERE IT SHOWS UP IN DRIVEDesk
TVA	Value Added Tax. The standard rate in Morocco is 20% .	Its own menu section. Every invoice shows HT, TVA and TTC. There's a full yearly TVA report.
HT hors taxes	The price <i>before</i> VAT.	Shown on every booking and invoice as "Total Amount (HT)".
TTC toutes taxes comprises	The price <i>including</i> VAT. What the customer actually pays.	"Due Amount (TTC)". The TVA report totals both.
ICE	Identifiant Commun de l'Entreprise — the company identifier that must appear on a legal invoice.	Company Settings, and printed on every invoice and contract.
RC	Registre de Commerce — the trade register number.	Same as above.
IF	Identifiant Fiscal — the tax identifier.	Same as above.
Patente	The local business tax reference.	Same as above.
Facture	Invoice. Must carry a continuous, gap-free number.	Generated automatically from each payment; sequential numbering is enforced.
PV / contravention	A traffic fine notice.	The Traffic Violations module.
Contrôle technique	The mandatory periodic roadworthiness inspection.	A reminder type, and an inspection type.
Vidange	Oil change / service.	A reminder type.
Caution	The security deposit taken against damage.	Appears in the contract terms as a clause. It is not a field you fill in. See §9.

Software words you'll be asked about

WORD	SAY THIS IF ASKED
Cloud / SaaS	"It lives on a server, not on your office computer. You reach it from any browser. If the office PC dies, nothing is lost."
White-label	"It carries your name, your logo, your colours and your own web address. Nothing in it says DriveDesk to your customers."
Multi-tenant / isolation	"Every agency gets its own installation and its own database. Your data is never mixed with another agency's — not even another of our clients'."
Roles & permissions	"You decide exactly what each employee can see and do. A counter agent can create bookings without ever seeing your revenue."
Responsive	"The same website reshapes itself for a phone screen. No separate app to install."
RTL	"Right-to-left. In Arabic the whole interface flips — menus move to the right, text reads right to left. It's real Arabic, not a translation bolted on."

04 The product, screen by screen

What it does · what to say · what not to say.

The menu on the left is grouped the way an agency actually thinks: **Home** (the dashboard), **Staff** (your employees), **Business** (cars, customers, rentals, contracts), **Finance** (money and VAT), and **System setup** (the lists you configure once). Walk a prospect down it in that order and the story tells itself.

4.1 Dashboard LIVE

Dashboard. Four operational numbers, an immediate-action list, a twelve-month income-versus-expense chart, and a seven-day fleet timeline.

The four cards are deliberately *operational*, not vanity metrics: **Cars Out Today** (with the fleet size next to it), **Returns Due Today** (with an overdue count), **Maintenance Due**, and **Today's Revenue** (with the month-to-date underneath). Below, **Immediate Actions** lists what is actually late — each line clicks straight through to the thing that needs doing.

"This is the screen your manager opens with their coffee. In five seconds they know how many cars are out, what's coming back today, what's late, and what money came in. Nobody has to be phoned."

#VHC-0006	Volkswagen T-Roc	SUV	2023	F-2345-G	Jul 21, 2028	1.5 TSI	

Vehicles. Every car with its own reference number, type, plate, registration expiry and engine.

Each vehicle carries: name and model, type (SUV, hatchback, minivan — you define the list), licence plate, engine type and number, registration expiry date, year of first registration, gearbox, fuel, number of seats, odometer, daily rate, options, a photo, a document, and notes. Each gets an automatic reference like **#VHC-0001** . The system refuses two vehicles with the same plate.

“Every car has a file. Not a line in Excel — a file, with its papers, its photo, its rate, and every rental, expense, fine and inspection it has ever had attached to it.”

Developed by Bangicoder

Drivers. Note the licence number, issue date and expiry right in the list — and the icon on each row, which is the blacklist.

In DriveDesk the renter is called a **driver**. The file holds name, email, phone, gender, date of birth, address, licence number with issue and expiry dates, national ID reference, company ICE, notes — and **four document uploads**: two for the ID and two for the licence. That means the scan of the customer's papers lives on their file, not in a drawer.

The blacklist — worth demoing on its own

Any customer can be blacklisted with a written reason. From then on, anyone trying to create a booking or a contract for them gets a blocking warning. A manager *can* override it — and when they do, the system permanently records who overrode it, when, on which contract, and what the reason said at that moment. Removing the blacklist later doesn't erase that history.

"You know the customer who returned the car with a dent and argued for three weeks. Flag him once, with the reason. Now every one of your staff sees it before they hand over keys — including the new one who started last Monday and has never met him."

Bookings. Two independent statuses per rental — where the car is (Yet to Start / On Going / Completed / Cancelled) and where the money is (unpaid / partly paid / paid).

A booking ties a vehicle to a customer for a period, with a pick-up and drop-off location, add-ons, a discount, a price and notes. It carries **two separate statuses** — the operational one and the payment one — which is exactly how an agency thinks. There's also **Import Excel** with a downloadable template, for an agency moving a year of history across.

The contract. Agency fiscal block top right (IF, RC, Patente, ICE), agreement details, driver, vehicle, three signature boxes, then the full terms and conditions article by article.

The contract is generated from the data already in the system, so nothing is retyped and nothing is missed. It supports a **second driver**, carries the agency's own terms and conditions, and prints on the agency's own letterhead. It can create the matching booking in the same step.

The signature

Signatures. Captured on screen, stored on the customer's file, and stamped into their contracts.

The customer signs with a finger on a tablet or phone, or with the mouse. The signature is stored against their file, so a returning customer's signature is already there. Separately, the **owner** draws their own signature once in Settings, and it is embedded into every VAT invoice PDF the system produces.

"Hand them the tablet. They sign with their finger. The contract is complete, stored, searchable — and you never lose it, because there's no paper to lose."

Drop Off Address	Av. Mohammed VI, 30000

A booking, priced. Add-ons and the drop-off surcharge listed as lines, then Total HT, TVA at 20%, and the amount due TTC — with the full payment history underneath.

How money is recorded

Staff record each payment against the booking. There are four methods: **cash (espèce), bank transfer (virement), card, and cheque**. Partial payments are normal — pay 3 000 on a 5 000 rental and the booking automatically shows *partiellement payé*. Pay the rest and it flips to *payé*. Nobody updates a status by hand.

The 5 000 MAD cash rule — demo this, it lands

Moroccan tax law caps what can be settled in cash on a single receipt. DriveDesk knows the ceiling. If cash exceeds it, the system can automatically split the payment into several compliant receipts, each within the cap and dated on distinct days inside the rental period — and it shows the staff member a preview of those receipts before anything is saved.

"Your accountant has probably told you about the cash ceiling. The system knows it. It won't let a receipt be written that breaks it — and if the customer pays cash above the limit, it produces the compliant receipts for you automatically."

Description

Enter the offence

Recording a fine. Read the line at the top: *“The plate and the exact time are what identify the renter.”*

You enter the plate and the exact date and time printed on the notice. DriveDesk finds which rental was running on that vehicle at that minute and names the renter — labelling the match as **exact**, **probable** or **none**. It never decides alone: your staff confirm, reassign or unlink. Then you track recovery — status (New / Renter notified / Paid / Contested / Written off), who is liable, and how much you actually got back. A batch of fines can be imported from Excel.

"A fine arrives in November for something that happened in July. You type the plate and the time. The system tells you it was Mr Benali, on contract RAG-0043, and here's his phone number. That conversation used to take an afternoon of digging — if it happened at all."

CAREFUL

The demo account has **no fines loaded**, so this list is empty. Either add one live in front of the prospect — it takes thirty seconds and it's a great moment — or show the create screen and talk it through. Do not open an empty list and hope they don't notice.

Vidange RAV4	Vidange	Toyota RAV4	2026-08-20	9	Pending	

Reminders. Four counters — Overdue, Urgent, Upcoming, Completed — and a list with days remaining, colour-coded.

Date-based alerts per vehicle: insurance renewal, *vidange*, *contrôle technique*, service. The system grades each one by itself and keeps it fresh — **Overdue**, **Urgent** (three days or less), **Upcoming** (a week), **Pending**. Anything overdue or urgent surfaces on the dashboard. Staff mark them complete, or snooze.

CAREFUL

Reminders are an **in-app** feature — the counters, the list, and the dashboard alert. Do **not** promise that the system will email or SMS the owner when something is due. See §9.

Inspection

Inspection

Q Search inspections...

+ Create Inspection

VEHICLE	INSPECTION DATE	INSPECTION BY	INSPECTION STATUS	REPAIR STATUS	ACTION
Toyota RAV4	2026-06-11	Équipe technique	Completed	Completed	
Dacia Duster	2026-07-11	Équipe technique	Completed	Completed	
Renault Clio	2026-07-26	Équipe technique	Reject	In Progress	
Mercedes GLE	2026-08-03	Équipe technique	Completed	Completed	
Peugeot 208	2026-06-26	Équipe technique	Completed	Completed	

Inspections. Vehicle, date, who inspected, the inspection result and a separate repair status.

A vehicle condition check: who inspected, the date, the odometer reading, a tick-box checklist the agency defines (with a note per line), an overall result — Pending, In Progress, Completed, Conditional Pass, Reject, On Hold — plus a repair

status, the repair cost, and one document upload.

DO NOT PROMISE

There is **no photo gallery and no click-the-car-to-mark-damage diagram**. It's a checklist with notes and one file upload. If the prospect asks for before/after photos of every panel, the honest answer is “not today”.

4.11 Expenses, credits and add-ons LIVE

Expenses record what each vehicle costs you — title, vehicle, category, date, amount, receipt upload. They feed the income-versus-expense chart on the dashboard, which is how an owner finally sees whether a specific car is profitable.

Credits track amounts a customer still owes, paid or unpaid.

ADDON	PRICE	BILLING TYPE	ACTION
GPS Navigation	50 Dh	per_day	 
Siège bébé	30 Dh	per_day	 
Conducteur additionnel	100 Dh	fixed	 
Assurance Premium	80 Dh	per_day	 
Wi-Fi portable	40 Dh	per_day	 

Add-ons. Extras with their own price, charged either *per day* or as a one-off *fixed* amount.

Places are pick-up and drop-off points that can carry their own surcharge — an airport drop-off adding 200 Dh, for example, which then appears as a line on the invoice.

4.12 Users, roles and permissions LIVE

NAME	EMAIL	TYPE	COMPANY	STATUS	ACTIONS
Manager	manager@gmail.com	manager	—	Active	 
ahmed	ahmedchioua@gmail.com	manager	ahmedcars	Active	 
achraf	znagui@gmail.com	manager	rentcar agency	Active	 
test	test@test.com	manager	test	Inactive	 
Claude Code deploy check	test+drivedesk-verify@bangicodema	manager	TEST - safe to delete	Inactive	 
test	hamzachioua@gmail.com	manager	test hamza	Inactive	 

Users. Staff logins for the agency.

Three roles ship ready to use — **owner** (everything), **manager** (day-to-day operations, but not settings and not role management), and the platform-level **super admin**, which is us, not the client. Beyond that the owner can build their own roles by ticking from **100 individual permissions**.

Two things worth saying out loud, because they're what a cautious owner is really asking: menu items the user has no right to simply don't appear — *and* the server refuses the action independently, so hiding the button is not the only defence.

"Your counter agent can create bookings and print contracts, and never see a single revenue figure. Your manager can run the whole operation and still not be able to change your company details or your VAT settings. You decide, line by line."

“Your name at the top, your logo on every contract, your ICE and RC on every invoice, your web address in the browser bar. There is nothing here that says DriveDesk to your customer. It is your system.”

4.14 Languages

French.

Arabic. The whole interface flips — sidebar on the right, text right to left.

Every user picks their own language from the switcher in the top bar; it does not change it for anyone else. **English, French and Arabic** are available today, with full right-to-left layout for Arabic.

CAREFUL

The marketing site says “14 languages”. What is genuinely *selectable in the application today* is *three* — English, French, Arabic. Translation files exist for around ten more and can be switched on, but they are not live. Phrase it as: *“Three languages today, including full Arabic right-to-left; ten more are prepared and can be enabled.”*

05 One rental, end to end

Tell it as a story. This is the moment the product clicks.

A customer walks in on a Tuesday and wants a Duster for five days. Here is every screen that gets touched — and what *didn't* happen.

#	WHAT THE AGENT DOES	WHAT THE SYSTEM DOES
1	Opens Planning to check what's free.	The board shows the Duster free from Tuesday. No phone call, no whiteboard.
2	Creates the customer in Drivers and photographs their licence and ID into the file.	Checks whether this person is blacklisted. If they are, the agent is stopped before keys are discussed.
3	Creates the Booking : dates, vehicle, pick-up, drop-off, add-ons.	Only free vehicles are offered. Days are calculated, add-ons and any drop-off surcharge are priced in, TVA at 20% is applied.
4	Generates the Rental Agreement and hands over a tablet.	The contract is filled from the booking — agency identifiers, driver, second driver, vehicle, full terms. The customer signs with a finger.
5	Takes 2 000 Dh cash now, the rest on return.	Payment recorded. Booking flips to <i>partiellement payé</i> . If the cash exceeded the legal ceiling, compliant receipts are produced automatically.
6	Nothing. Goes home.	A numbered facture exists, with the ICE, RC and IF on it. The dashboard now counts one more car out.
7	Five days later, records the return and an Inspection .	Odometer captured, checklist completed, any repair cost logged against that vehicle.
8	Takes the balance.	Booking flips to <i>payé</i> and <i>Completed</i> . Second invoice issued.
9	Six weeks later a fine arrives.	Plate plus timestamp identifies this rental and this customer. Recovery is tracked to closure.
10	End of month: sends the accountant a link.	The TVA report already has the month totalled — HT, TVA, TTC — and every invoice downloads as one ZIP.

"Count what nobody did in that story. Nobody retyped the customer's name. Nobody numbered an invoice by hand. Nobody updated a spreadsheet. Nobody went looking for a contract in a drawer. And at the end of the month, the VAT was already done."

06 The six things nobody else has

Generic rental software does bookings. These are why they buy *ours*.

1 Automatic traffic-fine attribution

Plate plus exact time identifies the rental and the renter, graded exact / probable / none, staff-confirmed, then tracked to recovery. Bulk import from Excel. **Nothing at this price does this.**

2 Moroccan cash-ceiling compliance

The 5 000 MAD single-receipt cash cap is built in, with automatic splitting into compliant, distinctly-dated receipts and a preview before saving. This is a genuine local regulatory feature — international software has never heard of it.

3 Moroccan invoicing, properly

Sequential *facture* numbers, ICE / RC / IF / Patente on every document, HT / TVA / TTC on every line, real PDF export, bulk ZIP download, and a renumbering tool. Built for a Moroccan accountant, not translated for one.

4 Contract plus on-screen signature in one flow

The contract is generated from data already captured, supports a second driver, carries the agency's own terms, prints on their letterhead — and is signed with a finger before the customer leaves the counter.

5 Blacklist with an override audit

Block a problem renter with a reason. It fires on both bookings and contracts. A manager can override — and who overrode it, when, and on what is recorded permanently, even after the blacklist is lifted.

6 Genuinely theirs

Own domain, own logo, own colours, own database, own installation, own encryption key. Not an account inside our system — *their* system. And they can stay on a version they trust for as long as they want.

The one-sentence version of each

FEATURE	THE SENTENCE
Fine attribution	"Type the plate and the time — it tells you who was driving."
Cash ceiling	"It won't let you write a receipt that breaks the law."
Invoicing	"Your accountant gets the whole year already totalled."
Contract + signature	"They sign with their finger and the contract is done."
Blacklist	"Flag him once and every one of your staff is warned."
White-label	"Your name, your domain, your database. Nothing says DriveDesk."

07 The 25-minute demo

Order matters. Do not wander down the menu.

Before you start

- Log in **before** they arrive. Never demo the login screen.
- Set the interface to **their** language first. It's a two-second click and it changes how the whole meeting feels.
- Have **Planning** and the **TVA report** open in two tabs — they're the two slowest screens to load.
- Know their fleet size and whether they issue VAT invoices. Ask on the phone beforehand.

TIME	SCREEN	WHAT YOU DO AND SAY
0–3	Nothing — talk	Ask the six qualifying questions from §2. <i>Do not open the laptop yet.</i> Find the pain you'll aim at. Then: <i>"Let me show you what your Tuesday morning looks like instead."</i>
3–6	Dashboard	Point at the four cards. "Cars out. Returns due today. Two services coming up. Money in this month." Then Immediate Actions: "This is what's late. It clicks straight through."
6–10	Planning	The whiteboard replacement. Switch day → week → month. Let them look. Say nothing for a few seconds — this screen sells itself.
10–14	Bookings → Create	Build a real booking with their own dates. Show that only free cars appear. Tick two add-ons and let them watch the price move.
14–17	Agreement + Signature	Open a contract. Point at their identifiers in the corner and their terms at the bottom. Then sign on the screen with your finger. <i>This is the moment people lean forward.</i>
17–21	Booking detail → TVA report	Show HT / TVA / TTC and the payment history on one booking. Then jump to the TVA report: "That is your whole year. Send this link to your accountant." <i>This is where owners over 40 decide.</i>
21–24	Traffic violations	Create one live: plate, date, time. Let the system name the renter. Thirty seconds, and it's the thing they'll repeat to their partner tonight.
24–25	Settings + close	Flash Company settings — "your ICE, your logo, your domain". Then ask for the next step, not for the sale: <i>"Shall we set up a test account with your own three cars in it?"</i>

If you only get 10 minutes

Planning → Contract with signature → TVA report. Nothing else. Those three carry the whole product.

CAREFUL

Do **not** open Traffic Violations, Booking Requests or the Expenses list cold in the demo account — Traffic Violations is empty, and Booking Requests is badged *Upcoming*. Create the fine live, and skip Booking Requests entirely unless you've verified it that morning.

08 Objection handling

The twelve you will actually hear.

THEY SAY	YOU SAY
"My Excel works fine."	"It does — until two people open it at once, or a car gets promised twice, or a fine arrives in November for July. What does Excel tell you about that fine?" Then show Planning and the fine attribution.
"It's too expensive."	Never argue price — convert it. "How long does your VAT take each month? Two days? What's two days of your time worth, twelve times a year? And one double-booking on a long weekend?" Let them do the arithmetic out loud.
"My staff won't learn it."	"It's in their own language — French or Arabic, whichever they prefer, each person chooses their own. A counter agent uses two screens: Planning and Create Booking. That's an afternoon, and we train them."
"Where is my data? Who can see it?"	"Your own installation, your own database, your own encryption key, on your own web address. Not an account inside a shared system — not even shared with our other clients."
"What if the internet goes down?"	Be honest: "You need a connection, the same as your bank. But the flip side is your data isn't on an office PC that can be stolen or die. And it works on the 4G on your phone."
"Can my customers book and pay on my website?"	Book, yes — pay, no. "Online card payment isn't part of the product today. Payment is recorded at the counter — cash, transfer, card, cheque. Is that how your customers pay you today?" Usually it is. <i>Never bluff this one.</i> See §9.
"Does it work on my phone?"	"Yes — it reshapes itself for a phone screen, and there's nothing to install. It's a website, so it updates itself." Open it on your own phone and hand it over.
"Can I try it first?"	Yes — and lean into it. That's exactly what drivedesk.ma is for. A live sandbox they can log into and break.
"I already have someone building me something."	"How long has it been?" Then: "Ours is already running in production for another agency, in three languages, with the VAT and the fines already solved. What would yours cost to get to here?"
"Can I get my data out if I leave?"	"Yes. Invoices export as PDFs in bulk, and it's your database — we hand it over." Say it confidently; it removes a real fear.
"What if you disappear?"	"It runs on standard hosting with a standard database — a cPanel account like the one you may already have. Any competent developer can take it over. You're not locked into a black box."
"Can it do [something specific]?"	If you know — answer. If you don't — "Let me confirm and come back to you today." Then actually do it, today. A wrong yes here is what loses accounts.

09 What you must not promise

Read this twice. Every item below is a deal that died at implementation.

THE RULE

Everything in this section is **not built today**. Some of it looks like it exists — there are settings screens and menu entries for several of these. That makes it more dangerous, not less. If you see it on a screen it does not mean it works.

Hard no — do not say these words

DO NOT PROMISE	THE TRUTH	SAY INSTEAD
Online payment (Stripe, PayPal, card on the website)	Not in the product. The payment settings screen still shows Stripe and PayPal fields, and the demo data even shows “stripe” and “paypal” as payment methods on old invoices — <i>none of it is connected to anything</i> .	“Payments are recorded at the counter — cash, transfer, card, cheque — with the legal cash ceiling handled automatically. Online card payment would be a development project.”
Discount codes / coupons	Coupons do not exist. There is a manual discount amount on each booking, which is not the same thing.	“You can apply a discount to any booking. Reusable promo codes aren't part of it.”
Multi-branch	Not built. There is no branch concept. “Places” are pick-up/drop-off points with a surcharge, not operating branches.	“One agency per installation today. If you have two branches sharing one fleet, let's talk about how you'd want that to work.”
14 languages	Three are selectable in the app: English, French, Arabic.	“Three today including full Arabic right-to-left, with around ten more prepared and ready to enable.”
Reminder emails / SMS alerts	Reminders show in the app and on the dashboard. The email side does not currently send. There is no SMS at all.	“Alerts appear on the dashboard the moment they go urgent or overdue.”
Photo damage capture / damage diagram	Inspections are a tick-box checklist plus notes, odometer, cost and one file upload.	“A configurable checklist with a note per item, the odometer, the repair cost, and a document.”
A mobile app	There is no App Store / Play Store app.	“It works properly on a phone browser — and nothing to install or update.”
Integration with their accounting software	There is no public API and no accounting connector.	“Invoices export as PDFs in bulk for the accountant. A direct link into your accounting package would be a project.”
A blog on their website	Not built.	Don't raise it.
Automatic deposit and late-fee calculation	Both appear in the contract terms as clauses. There is no deposit field and no automatic late charge.	“Your terms cover the deposit and late return. The amounts are handled by your staff.”

Say it carefully

- **Booking Requests** — the public request inbox is badged *Upcoming* in the menu. Don't demo it and don't sell on it until engineering confirms it's shipped.

- **Recurring reminders** — reminders don't reliably regenerate themselves on a cycle. Sell them as “create it, and the system chases the status for you”.
- **Contracts as PDF** — contracts print beautifully and save as PDF from the browser. True PDF *files* are generated for VAT invoices, not contracts. Nobody has ever objected to this, but don't promise an auto-emailed contract attachment.
- **VAT at 20%** — correct for Morocco, but it is fixed. A client in a different VAT regime needs development.
- **One currency** — configurable per client, but one at a time. Not multi-currency.
- **Daily rates only** — there's no weekly or monthly rate card. Long rentals are handled with the discount field or a manual daily price.
- **Very large fleets** — the planning board and the booking form load the full data set. Fine for the fleet sizes we target; be cautious above roughly 60 vehicles.

10 After they say yes

What you can commit to, and what you must not.

What onboarding actually involves

1. They point their **domain** at our host (or buy one — we can help).
2. We create their **own installation and their own database**.
3. We configure their **branding** — name, logo, colours — and their **legal identifiers** (ICE, RC, IF, Patente).
4. We set their **contract terms and conditions** — this is the step that needs *them*, so ask for their current contract early.
5. We load their **fleet**. Bookings can be bulk-imported from Excel using a template we supply.
6. We set up their **staff logins and roles**.
7. **SSL certificate** so the site is secure, and then training.

CAREFUL

Do not quote a go-live date on the spot. Timelines depend on their domain, their DNS, their hosting and how quickly they send their logo, terms and fleet list. Say: *“Once I have your logo, your legal identifiers and your contract terms, I’ll come back with a firm date.”*

Hosting questions you will be asked

QUESTION	ANSWER
“Can it run on my existing hosting?”	Usually yes — it runs on ordinary shared cPanel hosting, which is what most Moroccan agencies already have. Get their hosting details and let engineering confirm.
“Do I need a special server?”	No. No dedicated server, no Docker, nothing exotic.
“Can I use my own domain?”	Yes — that’s the normal setup. Their own domain, their own SSL certificate.
“Will you force updates on me?”	No. Each client runs a specific released version and can stay on it as long as they want.
“Is it secure?”	Encrypted connection, role-based access, protection against the standard web attacks, reCAPTCHA available on login, a login history showing who connected and from where, and automatic error monitoring in production.

What to collect from them before handover to engineering

- Company legal name, address, phone, email
- **ICE, RC, IF, Patente** — all four
- Logo (PNG) and preferred brand colour
- Their current rental contract / terms and conditions
- Domain name, and who controls the DNS
- Fleet list — plate, model, type, daily rate
- Staff list with the role each should get
- Preferred default language

Commercial terms

TO BE COMPLETED

Pricing, contract length, what's included in setup, training hours and the support commitment are **not** defined in this document. Get them in writing from management and staple them here. Do not invent a number in a meeting — quote the sheet, or say you'll come back with it.

11 Cheat sheet

Print this page. Keep it in your bag.

The pitch, in one breath

"DriveDesk runs your whole rental agency from one screen — your cars, your customers, your bookings on a visual planning board, contracts signed on screen, and your VAT invoices generated automatically. Your logo, your domain, in French, Arabic or English."

The five screens that sell it

1. **Planning** — replaces the whiteboard
2. **Contract + signature** — replaces the Word file and the paper
3. **TVA report** — replaces two days a month
4. **Traffic violations** — recovers money they currently write off
5. **Dashboard** — replaces four phone calls a morning

The numbers

29 business modules	100 permissions, 3 ready-made roles
3 languages live (EN / FR / AR)	Full right-to-left Arabic
20% TVA, HT / TVA / TTC everywhere	5 000 MAD cash ceiling, handled
4 payment methods	Bulk invoice export as ZIP
Own domain, own database	Runs on ordinary cPanel hosting

Never say

NO online / card payment on the website · **NO** coupons or promo codes · **NO** multi-branch · **NO** mobile app · **NO** damage photos or damage diagram · **NO** reminder emails or SMS · **NO** accounting integration · **NO** "14 languages"

The three questions that open every call

1. "How many cars do you have out right now?"
2. "How long does your VAT take you each month?"
3. "What happens when a fine arrives three months later?"

The close

"Shall we set up a test account with your own three cars in it, so you can show it to your manager this week?"

Demo environment: drivedesk.ma — log in before the meeting, set the language first, and remember the demo data resets overnight.

When you don't know: "Let me confirm that and come back to you today." Then do it today.
